Subject: I oppose HR4575

Dear Regulatory Reform Committee,

I am opposed to HR4575, which I understand prohibits local governments from banning natural gas appliances.

Please allow local governments to implement laws to reduce natural gas use.

You have received many communications listing reasons why this is a good idea. These include:
-allowing different locales to exercise more future looking laws where the citizens support them. This may be the only way we can implement a lower carbon economy in the short time we have to avoid the worst effects of burning fossil fuels.

- Electricity can be supplied from renewable sources that do not emit carbon.

I want to provide the best world for my children and grandchildren. Please, let's do this for all of our children.

Sincerely,
Clark McCall
